ABOUT ME

Final-year B.Tech student specializing in Artificial Intelligence and Data Science, with strong C++, SQL, and Python skills. Experienced in building AI-powered systems using LangChain, FAISS, vector databases, and transformer-based models. Experienced in designing Django and DRF backend systems. I also participate on [Kaggle](#).

EXPERIENCE

Cruv.org | Backend Developer
Remote

JAN 2025 - MARCH 2025

- Built a distributed email automation system handling **1000+** concurrent IMAP connections with automatic failover.
- Engineered an end-to-end async Python pipeline that ingests **70+** cybersecurity RSS feeds, extracts source content, and uses LLM-powered summarization (Gemini + LiteLLM) with Qdrant vector embeddings to deliver real-time, executive-grade risk intelligence — leveraging MongoDB bulk writes, aiohttp concurrency, Pydantic structured outputs, and production orchestration with health monitoring
- Built a robust email backend using Django and Mailgun Webhooks and Routes, implementing automated conversation threading, secure S3 attachment storage, and cryptographic webhook verification to ensure reliable inbound and Outbound processing.

Technokeens IT Solutions Pvt Ltd | FullStack Developer
AI Powered Project Management System

June 2025 - Nov 2025

- Constructed a fully functional Django backend with DRF, including custom models, token-based authentication, and RESTful APIs for projects, tasks, bugs, and sprints, integrated seamlessly with a React frontend via Axios.
- Developed WebSocket-based real-time chat functionality (workspace specific) using Django Channels.

PROJECTS & OPENSOURCE

Fashion Visual Search and Intelligent Styling Assistant | TypeScript, PyTorch, Selenium, CLIP

 git

- Engineered a hybrid **GNN-CLIP** recommendation engine combining visual similarity, outfit compatibility learning (graph neural networks), and metadata-based filtering for enhanced product discovery.
- Delivered a CLIP + FAISS visual search achieving **97%** accuracy and **10ms** query latency across **50K+** products.

Offline Document Processing System Using RAG Pipeline | Python, LangChain, FAISS

 git

- Offline RAG pipeline with LangChain, FAISS, and local LLMs delivering **90%+** relevance accuracy.
- High-scale OCR document processing **500+** pages optimized for low memory and unstructured data.

TECHNICAL SKILLS

Languages: Python, R, Go, SQL, C++, JavaScript

Libraries & Frameworks : Asyncio, Django, Celery, Temporal, FSM, Langchain, Transformers, Mailgun, IMAP, Scikit-learn

Data Skills: Data Cleaning, Data Analysis, Machine Learning, Statistical Analysis, Data Visualization

Tools: Git, Docker, Openshift, Kubernetes, AWS

Soft Skills: Problem-solving, Teamwork, Communication, Fast Learner

EDUCATION

Vishwakarma Institute of Information Technology, Pune
B. Tech in Artificial Intelligence and Data Science

Nov. 2022 – Present
CGPA: **8.25**

ACHIEVEMENTS & CERTIFICATIONS

• Best Paper Award - IEEE PUNECON 2025

Recognized by Department of Technology, Savitribai Phule Pune University
Title : **Decentralised Voting System using Blockchain** [IEEE Published]

• Copyrighted Project: Exploring Birdsong through Acoustic Clustering

Project for analyzing bird vocalizations using acoustic features.

[Copyright]

• IBM - Full Stack Development, Machine Learning and DL in Python and R - Udemy

[Certificate]

• Startup: During second year of college, I bootstrapped two startups **Kala-connect** - connecting Artisans and Buyers and **PROBOXX** a startup that provides protein rich meals.

LEADERSHIP / EXTRACURRICULAR

Entrepreneurship Development Cell

Associate Technical Head & Finance Lead Manager

Sept 2023 – Oct 2024

VIIT, Pune

- Collaborated in building EDC Website
- Took Workshops to Create Awareness among students for budgeting in daily life.
- Finance Head for Vishwapreneur'24, Pune's biggest E-Summit.
